Giuseppe Adams Damasin

Senior Full-Stack Software Engineer | AWS Cloud Infrastructure
Manila, Philippines | ga.damasin@gmail.com | linkedin.com/in/gidamvlad | Open to remote roles

PROFESSIONAL SUMMARY

Senior Full-Stack Software Engineer with 5+ years of experience building SaaS platforms, scalable microservices, and cloud infrastructure for US-based companies. Delivered 60-80% performance improvements on production systems, led distributed engineering teams, and owned AWS production infrastructure end to end, including certificate and patch automation, job monitoring, security remediation, and VPC migration planning. Expertise in React, TypeScript, Java Spring Boot, NestJS, PostgreSQL, and AWS (ECS, EC2, Aurora, Lambda, Step Functions, CloudFormation).

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Java, Swift, Dart, SQL, PowerShell
- **Frontend:** React, React Native, Flutter, SwiftUI
- **Backend:** Java Spring Boot, Node.js, NestJS, GraphQL, RESTful APIs
- **Databases:** PostgreSQL, MySQL, Amazon Aurora, Supabase
- **AWS:** EC2, ECS, Aurora/RDS, Lambda, Step Functions, EventBridge Scheduler, SES, ACM, Elastic Load Balancing, VPC, VPC Flow Logs, WAF, Systems Manager Patch Manager, CloudFormation
- **DevOps and Infrastructure:** Infrastructure as Code, CI/CD, Docker, Linux, Networking (CCNA), Monitoring and Alerting
- **Security:** Security Group Auditing, Network Exposure Remediation, Secrets Management, Patch Compliance, PCI Scan Readiness
- **Tools:** Git (GitHub, GitLab, Bitbucket), Jira, Jest
- **Methodologies:** Microservices, OOP, Agile/Scrum, Test-Driven Development

PROFESSIONAL EXPERIENCE

AWS Infrastructure Engineer (Contractor)

PayLink Payment Plans LLC | Remote | Dec 2025 – Sep 2026

Owned AWS production infrastructure for a payment-plan provider: ~28 EC2 instances, ECS, and Aurora across multiple environments and three business platforms.

- Replaced a manual twice-yearly certificate purchase process with DNS-validated, auto-renewing AWS Certificate Manager (ACM) certificates across 4 of 5 production domains and 13 load balancer listeners, removing an expired certificate left as a production default for six months
- Built a daily job-status digest (AWS Lambda, EventBridge Scheduler, Amazon SES) covering 54 scheduled production jobs; it surfaced a silently failing nightly ECS job, which I fixed with an AWS Step Functions retry that distinguishes a refused container launch from a failed job
- Wrote a PowerShell patch runner for 26 Linux hosts after finding hosts reported fully patched by Systems Manager were a release behind, closing the gap between patch compliance and PCI scan results
- Remediated public network exposure on Aurora databases and over-permissive security groups (database and RDP ports), verifying with VPC Flow Logs and documenting before-and-after evidence for every change
- Planned a production VPC migration off an overlapping CIDR range, delivering a flow-log dependency map, cost model with disaster recovery, cutover runbook with rollback, and 8-week schedule; defined the new network in CloudFormation with automated pre-deploy checks

Senior Software Engineer (Contractor)

Floor & Decor | Seattle, WA (Remote) | Feb 2025 – Nov 2025

- Engineered the SingleView Ecommerce Service (SVES), a Java Spring Boot application generating nightly XML product catalogs from the unified ecommerce database, cutting execution time 60% (12 minutes max against a 30-minute target)
- Built the catalog generation module coordinating master products, variants, and standalone items, producing 2 GB compressed XML files with SFTP upload completing in 2 minutes
- Optimized the data pipeline to process 97,000+ product records and write them to PostgreSQL in 10 minutes

Senior Software Engineer
Surepoint Technologies | Austin, TX (Remote) | Jun 2023 – Jan 2025

- Led the SaaS transformation of Coyote Analytics, converting a monolithic Windows application into Coyote Practice Management (CPM), a cloud-based platform for legal and consulting firms
- Led a distributed engineering team across India and Pakistan, owning architecture decisions, code reviews, sprint planning, and mentorship
- Delivered 80% performance gains over the legacy application and implemented CI/CD pipelines and cloud deployment standards for a successful production rollout

Mid-Level Software Developer
Stack Education Technologies | Manila, Philippines | Jan 2022 – Mar 2023

- Refactored 20+ fragmented microservices (Registrar, Onboarding, Library, Cashier) into a maintainable, high-performance architecture
- Built reporting tools consolidating multi-database student and payment data into presentable reports
- Supported production systems and improved React frontend and backend efficiency through cleaner API integration

Full-Stack Developer (Contractor)
The Bored Guys Inside Solutions | Quezon City, Philippines | May 2021 – Dec 2021

- Initiated and built Empire Core, a cloud-enabled SaaS platform for warehousing, product catalog management, and analytics, using NestJS and React
- Replaced legacy WinForms reports with drag-and-drop DevExpress reporting interfaces

PERSONAL PROJECTS

Farm Connect | Flutter, Supabase

- Built a social and marketplace platform connecting farmers with buyers through produce listings
- Implemented real-time commodity pricing across major markets with filtering and search
- Developed authentication, user profiles, posting, and direct messaging with cloud database integration

Chair Yoga for All | SwiftUI, iOS

- Published an iOS app on the Apple App Store featuring gamified chair yoga exercises for accessibility and wellness, with progression tracking and motivational features

FitFrail | React Native

- Built an appointment scheduling app for physical therapy clinics specializing in geriatric care, with booking and patient management
- Developed assessment tools for evaluating frailty levels in elderly patients

CricCoach AI | Flutter, Computer Vision

- Built an AI-powered cricket coaching app that analyzes uploaded videos and images for automated technique correction and personalized suggestions

EDUCATION

Bachelor of Science in Information Technology
University of the Immaculate Conception | Davao City, Philippines | 2021

- GPA: 3.5
- TOPCIT Level 4 Passer (Test of Practical Competency in IT)

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA), Cisco
